

Data Governance Primer

ACCELERATOR

Overview

Data governance programs are important to allow organizations to run properly with efficiency and effectiveness. Too often, these data governance programs develop a reputation of being too big, clumsy, and difficult to manage. Bigeye provides a great set of tooling to assist you as you move forward. This package is designed to progress your data governance program in a collaborative manner.

With this professional services engagement, our experts partner directly with your team to move forward with your data and data governance program. We will use an asset driven approach to show you what can be done i.e. learn before doing, learn while doing: work together to get into Bigeye and build out capabilities, and review and improve or learn after doing. At the close of this project you should have a good read on where your data governance program is at, and where it needs to go to next.

Key Benefits

- Gain an evolved understanding of DG
- Learn / start to use Bigeye for DG Checks
- Introduce lineage to your DG Program
- Start or Continue your data program with data governance and data observability at the forefront

What's Included

Kickoff

We will review your current data governance program and help to show you how Bigeye can play a part and to help reset your data governance initiatives. This will focus on foundational framework and people

Education

We will run a series of educational sessions to provide knowledge transfer of the current view of data governance, data observability, and data checks

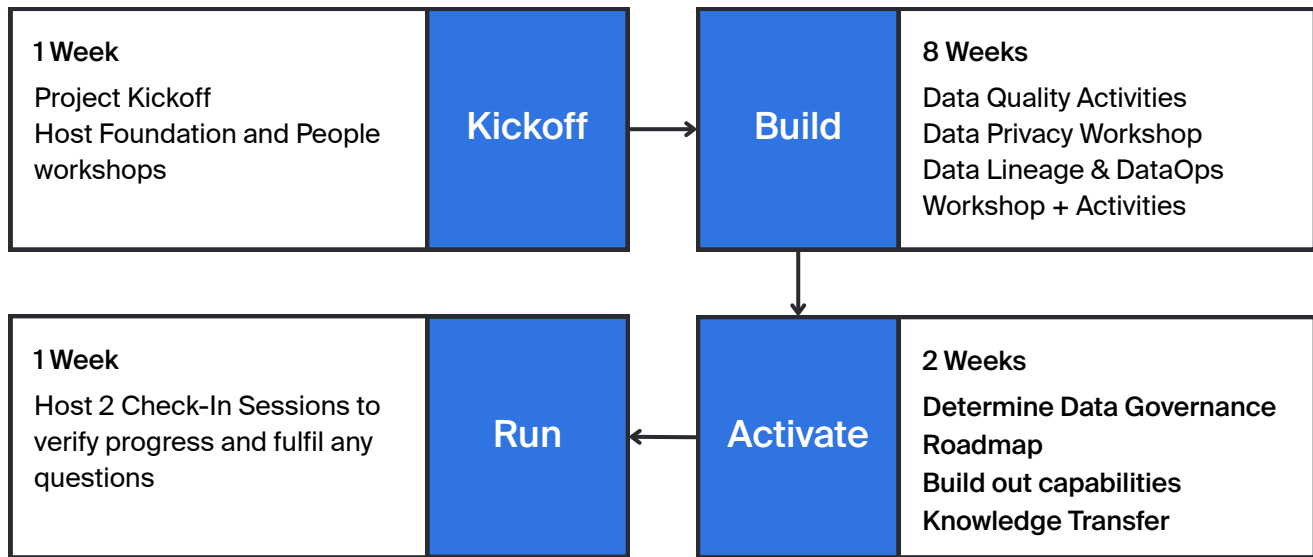

Build Out

Work to build out an initial set of data quality checks, lineage graphs, and project assets to drive the program forward

Knowledge Transfer

We will work with the team to provide knowledge assets to continue to grow your data program. These will include things such as Data Governance Direction Deck and a Data Governance Roadmap

Lifecycle

Sample Deliverables

- Establish Data Governance Draft Framework Deck
- Build out sample set of data governance quality checks
- Establish data lineage prototypes for a set of critical data elements (CDE's)
- Introduce or expand data governance roadmap

The Bigeye data observability platform helps data teams proactively detect, understand, and resolve data pipeline and quality issues so you can create in trust in everything your organization builds with data.
